

COLLABORATIVE

SUSTAINABLE

CUTTING-EDGE

MECHANICAL / ELECTRICAL ENGINEERING CO-OP (WINTER / SUMMER)

Established in 1990, Peter Basso Associates is a 100% employee-owned, licensed professional engineering-only corporation. We provide mechanical and electrical engineering, energy management, communication technologies design, building commissioning, architectural lighting design services, and LEED® services, primarily for Education, Healthcare, and Corporate/Governmental facilities.

As a co-op you are provided with a hands-on learning experience giving an accurate view into the field of engineering design. Co-op students provide engineers with assistance on design projects. In return, engineers will provide each student with the training and education needed for working in the engineering industry. Working at PBA allows you to apply your classroom techniques and theories to real world and engineering design projects.

Do you share our commitment to superb engineering and do you meet the following requirements?
If so, we'd love to hear from you.

Mechanical Engineering Co-op Responsibilities: Assist in the design of building mechanical systems, including HVAC, temperature controls and plumbing

Electrical Engineering Co-op Responsibilities: Assist in the design of building electrical systems using lighting and load calculations
